

JUNGLE HONEY COMPANY
Certified Australian BioACTIVE Eucalyptus Honey

ABOUT US

Jungle Honey Company Australia was founded by Tim Nguyen in Victoria Australia in 2017. Tim hales from a family with generations of extensive medical experience across a wide variety of medical disciplines including both Western and Eastern medical traditions. As an experienced Apiarist, and with input from his family, Tim recognised the medicinal benefits and outstanding healing power of raw natural Eucalyptus floral honey.

After many years of testing and experimentation, Jungle Honey Company have been able to hone a process that results in the targeting three species of native Australian eucalyptus flora. The three specific species of Eucalyptus Gumtree targeted generate honey of the highest quality containing the highest level of medicinal properties.

Jungle Honey Company's Apiarists with a combined beekeeping experience of over 40 years, manage beehives to ensure our bees forage for nectar in clean native Australian eucalyptus forests, accessing only our target species of Eucalyptus . In doing so, The Jungle Honey Company is able to produce all-natural Australian BioActive honey of the highest of Total Activity, Quality, medicinal properties and unique fragrance.

OUR MISSION

Our mission is simple, to supply the world with the highest quality medicinal grade BioActive 100% natural eucalyptus honey harvested from native Australian Eucalyptus forests.

OUR PRODUCTS

Jungle Honey Company Australia produces 100% pure, medical-grade Eucalyptus BioACTIVE honey, sourced directly from our own beehives in Australia. With Total Activity ratings of TA30+ and TA35+, our honey products offer superior health benefits compared to traditional honeys like Manuka and Melaleuca.

Jungle Honey Company provides pure, unadulterated honey from the Jarrah, RedGum, and Blackbutt trees, three of Australia's remarkable BioActive honey varieties.

- **Jarrah Honey** is a dark, dense, delicious honey with a hint of caramel flavor.
- **RedGum Honey** has a deep golden color, a thick consistency, and a beautiful appearance with a mild honey taste.
- **Blackbutt Honey** is a dark-colored honey with a rich, robust flavor similar to our Jarrah honey.

Experience the natural goodness and exquisite flavors of Jungle Honey Company's Eucalyptus BioActive honey varieties.

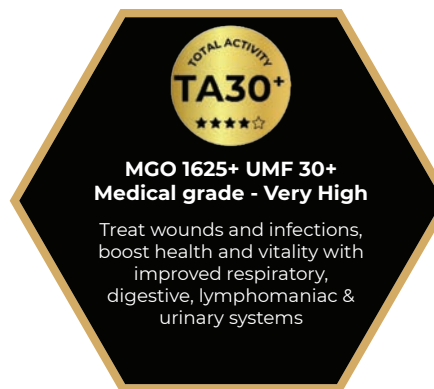

ACHIEVING BioACTIVE HONEY

Jungle Honey Company Eucalyptus BioActive Medicinal Honey contains extremely high levels of anti-bacterial, anti-inflammatory and anti-microbial properties. Unlike some other honey producers, the super active medicinal properties in Jungle Honey Company Eucalyptus Medicinal Honey are all naturally occurring with no interference or introduced material whatsoever.

Our bees forage nectar on gum flowers within all natural monofloral gum tree forests. As they do so they add enzymes, glucose and oxidisers to the nectar to form naturally occurring hydrogen peroxide. As the nectar is passed from one bee to another within the hive, more enzymes are added which converts the nectar into honey. As the enzymes react with water in the honey, glucose and fructose occur naturally. The process also has an intensifying effect and supercharges the level of the key naturally occurring ingredient - hydrogen peroxide.

Total Activity or TA in Eucalyptus honey is the level of antimicrobial activity present within the honey. It is scientifically measured and graded to determine the level of TA. The number of a TA score (for example 35+) represents the medicinal antimicrobial strength of the honey. The higher the TA number the greater antimicrobial strength of that honey. The medicinal properties of Total Activity honey are derived from both peroxide activity and non peroxide activity (PA + NPA = TA).

In order to guarantee our Eucalyptus BioActive Medicinal Honey is delivering on the high level of medicinal properties we claim, the Jungle Honey Company has our honeys rigorously tested to ensure our claimed levels of 30+ - 35+ Total Activity are maintained. Any batch of honey that does not meet this exacting standard, is not released for sale as Bioactive honey.

COMPARISON JUNGLE HONEY VS MANUKA			
	TA (Total Activity)	UMF (Unique Manuka)	MGO (Methylglyoxal)
EXTREME ANTIBACTERIAL & ANTIMICROBIAL GRADE Wound Care & Digestive health	35+

THERAPEUTIC GRADE General Wellbeing	15+	15+	550
	10+	10+	263
DAILY CONSUMPTION Daily maintenance	5+	5+	100
	JUNGLE HONEY PRODUCTS	MANUKA HONEY	

SUSTAINABILITY & ENVIRONMENTAL RESPONSIBILITY

At Jungle Honey Company, we are deeply committed to sustainability and environmental responsibility. We recognize the importance of preserving the delicate balance of nature and protecting our precious resources for future generations.

Here are some key initiatives we undertake to ensure sustainable practices:

- **Bee-friendly Apiaries:** Our beehives are carefully managed in harmony with nature, providing a safe and healthy environment for our bees. We prioritize their well-being and ensure sustainable beekeeping practices that promote their vitality and population growth.
- **Native Eucalyptus Forests:** We source our honey from native Australian Eucalyptus forests, which are rich in biodiversity and natural beauty. By promoting the preservation of these forests, we contribute to the conservation of native flora and fauna habitats.
- **Ethical Harvesting:** Our honey is harvested using ethical and responsible practices. We carefully collect a portion of honey from each hive, ensuring the bees have an ample supply to sustain themselves and maintain their hive's health.
- **Packaging Innovation:** We constantly strive to reduce our environmental footprint by employing sustainable packaging solutions. Our packaging materials are eco-friendly and recyclable, reflecting our commitment to minimizing waste and promoting a circular economy.

By choosing Jungle Honey Company, you not only enjoy the finest quality honey but also support a sustainable and environmentally conscious brand. Together, let's make a positive impact on our planet and create a better future for all.

The Jungle Honey Company Australia takes immense pride in producing the highest quality 100% pure raw medical grade BioActive Eucalyptus honey.

What sets our honey apart is the rigorous testing and certification conducted by the esteemed National Measurement Institute of Australia. Each batch of our honey undergoes comprehensive evaluation to determine its Total Activity (TA) rating. Only the batches that achieve a TA rating of over 30 are selected, ensuring that our customers receive honey with exceptional health benefits.

With TA ratings ranging between 30+ and 35+, our honey products surpass the health benefits offered by more traditional honeys such as Manuka and Melaleuca. The elevated levels of bioactive compounds in our honey contribute to its remarkable healing properties, making it an ideal choice for those seeking superior health and wellness benefits.

HEALTH BENEFITS OF HONEY

The uses of honey in health care trace back many centuries. Now that honey is being re-examined by modern researchers, it's increasingly recognised for the medicinal and nutritional properties that made it a staple of these practices for thousands of years.

Some active uses of Jungle Honey Company Eucalyptus BioActive Medicinal Honey include:

- **Use on the Skin.** The skin is the largest organ of the body and benefits greatly from the application of honey. Natural medicine texts have described how honey promotes healing of wounds and sores and acts as an antiseptic, a pain reliever, and a cooling balm that speeds recovery from burns.
- **Slow or Support Aging.** Honey helps build tissues and generate energy and heat, three properties that make it good for aging bodies. One or two teaspoons of honey in a cup of warm water with lemon is a refreshing and strengthening drink.
- **Improve Blood Health.** Because honey contains iron, manganese, and copper, it is excellent for building haemoglobin. In cases of anaemia, natural medicine practitioners suggest using honey to maintain the right balance of haemoglobin in red blood cells.
- **Aide Digestive Health.** Honey is easily digested and assimilated, making it one of the best sweet foods for reducing stress on the digestive organs. Honey is also useful for maintaining the health of the stomach. Experts find honey not only supports proper digestion, but also helps ward off stomach diseases and symptoms like nausea, vomiting, and heartburn by preventing the overproduction of hydrochloric acid.
- **Oral Health.** As an antimicrobial and anti-inflammatory, honey helps maintain healthy teeth and gums. According to natural medicine, a daily application of honey cleanses the teeth, makes them sparkle, and helps prevent tartar, decay, and premature tooth loss. Gargling with honey and water is very useful in protecting against gingivitis (i.e., inflammation of the gums caused by bacterial infection).
- **Energy Booster.** Honey can be easily added to all your meals to supply the body with extra energy. Natural medicine texts recommend honey for arteriosclerosis and weak hearts. It can be taken before bed in a glass of water with lemon juice to provide the heart with energy throughout the night and to alleviate cardiac pain and heart palpitations.
